[illegible][illegible][illegible][illegible]

triumph. The acclamations of his
have been louder than the exertions
of his foes. Those who have read the story
of the coronation might very well conclude
that the Russian people are a simple
people, as the Russians are. And so far as
the bulk of the population of Russia
concerned, such a conclusion would be the
one. It is said that nine-tenths of the
population are as loyal as they ever were,
and is little reason for doubting the truth
of the statement. If the proper rule for a country
is one which commends itself to the great
majority of its people, the proper rule for
Russia is for a long time to come will be that of
the Czar.

Nihilists, although forming a deter-
mined, and in a sense an influential body,
are not numerous. The statement is
the number of the men who are
affiliated to the revolutionary
movement is not more than
in all. It is doubted whether it
more than a thousand. The belief
among these men cherishes is the one which
among certain classes in Ireland—that if
they are to get the liberties which they hold
for their due they must fight for them, and
merely with powerful words, but, if need
with powerful explosives. The remedy is
likely to prove effectual in either
country, and for this the recent action
of the nihilists will not be sorry. Bad as au-
tomay be, it can hardly be said to be
than Feudalism and Nihilism. Terrible
policy of the assassination mongers of
had been, no one can seriously believe
there is any chance of its proving a suc-
cessful policy. Nor is there much chance
of the Nihilistic conspiracies of the
of the order less in Ireland. The
of the presence of mankind is not on the
of either. Already it is said the Nihilists
losing strength. "The cloud of dread
is, after the murder of ALEXANDER II.,
settled down upon the court of St. Peters-
burg." We were told a few weeks ago, "has
been partially lifted. Though the
life of the Czar has ended probably
very early, and no Russian Emperor will
stroll untended through the streets
of St. Petersburg, or enter uninvited
a private house, as ALEXANDER II.
did." NICHOLAS used to do, ALEXANDER III.
is moving among his subjects, holding
receptions and giving entertainments, and even
dining at semi-public dinners in the
city. It is possible to obtain an order
of admission which will allow one to
of the streets of St. Petersburg have seen his
face. Whether the police, as they boast, have
all complicitors, or some secret
agent has been made with their chiefs,
the Court in despair has resolved to dis-
continue the Czar has certainly recovered
freedom of action, the Czarina is relieved
of fears for her children which at one time
menaced either life or reason, and the Mi-
nisters relieved in part of their unendurable
duties." Recent cablegrams are calculated to
cast a doubt as to whether this picture
is too bright; but the teaching of
the Czar has been that Nihilism is not gaining
ground, and to this conclusion the brilliant
ceremonial seems to point.

It is not by Nihilists alone that the
the cause for Liberal institutions made. It
is not the Nihilists alone that they demand
of the institutions at all. What they want is
Liberal, but a Communal Government.
The Nihilists themselves would say that what
they are seeking is not a Communal
Government even, but the negation of all
Government whatsoever. There is, however,
a class in Russia who ask that instead
of the Czar alone the Czar shall rule with
the aid of his people. Among Russian politi-
cians as well as among those of other
nationalities, and among the Conservatives, Liberals,
Radicals, and among the Radicals there are
revolutionists as well as the revolutionists,
who trust to argument as well as
to rule trust to dynamite. The Liberals,
rule, belong to the educated classes,
and those, that is, who have learnt Western
manner, and who copy Western manners,
and who are taught to admire Western
institutions. But it is not among Russian
politicians alone that there is a desire for a
constitutional regime. The Conservatives
made up of three divisions, the
Reactionaries, the Slavophiles, and the Ultra-
reactionaries, and of these the Reactionaries
contend that the national rule is un-
changeable. Three or four years ago a proposal
to establish a constitutional regime was laid
before ALEXANDER II. by Prince GORTSCHAKOFF.
At that time the subject was taken
the Zemstvos or the provincial legisla-
tures. Changes in this direction are ro-
undly with favour by the Slavophile section—
it is undoubtedly the most influential
—of Russian Conservatives. The aim
of the Slavophiles is the establishment of
the rule of the people. It is understood
that his father's life the sympathies of
the Czar were on the side of the ultra-
reactionaries; and to his friendship with Ger-
man the late Czar was always faithful. But
the ultra-reactionary party in the State he may have
acquired, he acquired the reputation of being
sympathetic with popular aspirations. The
policy of the policy of his predecessor,
was to encourage such aspirations.
ALEXANDER II. emancipated the serfs, insti-
tuted modern courts of justice, trial by jury,
elementary law schools, suppressed corporal
punishment, relaxed the censorship of the
press, insisted on the compulsory instruction
of children, encouraged the superior education
of women, and established the State
of the setting-up of institutions of the
of the Czar can afford to despise. In his
years ALEXANDER II. was too old and
too worried to continue the work he
recently began, but there can be little
doubt that if Russia is to go on and
prosper, this feature in the policy of the late
Czar will have to be faithfully copied under
his successor one.

And humanity is seldom found in opposi-
tion to the roughest athletic sports. It is
not only in cricket, with its dangers of cracked
knees and broken heads; football, that has
been attended with the most fearful accidents,
on occasions rendered promising leads
as cripples for the remainder of the
life. It sets no restraints upon the most
vigorous boating and yachting. It is
found willing to encourage such purely
active pastimes as boxing and sparring,
receptions which regard safety and
and with the most watchful solicitude
will propose any curb which shall
prevent full physical development, or the
enjoyment of those prompt and chivalrous
sports which accompany perfect health in
the athlete.

NEW YORK, APRIL 28.

The South has been visited with a terrible cyclone, which striking the American coast near New Orleans, made a path of havoc northward, until in North Carolina it was exhausted. Nearly four millions are known to have been lost, and the lives of many smaller towns are constantly increasing the death-roll. The most massively built structures—churches, jails, public buildings, &c.—were torn to pieces in a second. The most extraordinary accounts are given of the freemen of the South, who were seen in the ruins of a lofty seating in the office of the clerk of one of the Louisiana counties was picked up on the highway 50 miles distant. Men walking in the open were caught up into the air, and hurled with fatal violence against the roofs. Roofs were buried off houses, and transported hundreds of miles. The victims were either by terror or internal injuries which left no outward trace. The North and West have already come promptly to the relief of the sufferers, in spite of the fact that the subscriptions in aid of the inundated States were not yet opened. The thousands of the people injured in the other numerous disasters since the beginning of this unlucky year, have absorbed a great deal of money. The great destructiveness of the cyclone is attributed to the same cause which has been the cause of the late storms from Arizona through to the States north of it, and which has destroyed the forests and wanton cutting down of the forests. The careful records which for 10 years past have been kept by the meteorological bureaus show conclusively that the present climate is undergoing a change in well founded fact. The fact that the cyclone has caused the destruction of the woodlands is the cause of it. The evil is generally recognized, but as yet no steps have been taken either by Congress or the States Legislatures to supply a remedy. The pecuniary interests of the men who are engaged in the lumber business are very high, and wherever legislation is threatened, they are sure to lobby heavily to secure a postponement of positive action. The matter has reached the point now, however, where it constitutes a necessary subject of debate in each session, and from that to the required legislation is merely a matter of time. There should be in each State a superintendent of forests with absolute power to prohibit the cutting down of any lands at a greater rate than its natural increase.

This is the dull season in politics. The President has been busy with the fishing, for the greater part of the month, but the subject of the free-trade bill with the public business. The only ripple of excitement has been caused by the breaking out of an insurrection among the Democrats. After the last election it was not probable that that party should win in the Presidential campaign, and the free-trade law had already spoiled their chances. The great point to be decided among them is the election of a Speaker for the next House of Representatives. Their old Speaker, Mr. Harrison, is a protectionist—necessarily, because he came from the West, and it was not possible for him under no conceivable circumstances to be elected a free-trade man. The free-trade men, however, for town and country—the free-traders, being in a large majority, refuse to support him. Banquets have been held all over the country for or against him, and the most important of these took place in Chicago, and after a discussion of the merits of the most prominent leaders in the Union formally decided for absolute free trade. But a little before the meeting the Mayor of Chicago, Mr. Harrison, who was re-elected after a little struggle, got the protectionist, and decided to support the free-trade principle, he was convinced that not a single free-trader in the North could be carried upon that issue, and the vote of the Southern States was opposed to it. It was supposed that Mr. Harrison's speech was delivered on the 10th inst. The next day's papers, however, showed that in Chicago, and the result was that the Democratic press all over the country had printed editorially, accepting free trade as the coming shibboleth.

[illegible]

WELLINGTON, May 3

[illegible]

MACQUARIE LIGHTHOUSE.

wherever there are large numbers, are sent for by friends here, who pay £40 of the passage money of each, and take them on arrival, the Government being thus put to no trouble to find depots and work for the new comers.

The freezing meat trade grows apace, a fifth port having been opened into it. A sailing ship full of meat is just leaving the Bluff; and Nansen is likely to make a sixth place of export shortly. At the four chief ports provision is being made to work on a large scale. Companies in Wellington and Auckland are building largely for the export of sheep. The wool trade has been in full operation for a year past. Whether our spare stock will continue enough to keep the trade going in six ports remains to be seen. Meanwhile the export, and the taking up of new country from the Maoris in the North Island, have greatly raised the value of sheep. The stock now at the Bluff is about 200,000, with calves, selling for £3 each, and on the west coast of the North Island. This is giving a severe pinch to the small settlers, who gave up to £100 an acre for land in its natural state on the Waimate Plains a year ago, that district being best adapted for cattle. Nevertheless, on the same plains, large areas of native scrub are being cleared, and the stock now at 200,000 a year a few days since at up to 250, an acre a year, and 100,000 acres more now open will bring like prices. The land is the very best; but some will come to grief in buying and leaving at those figures. The Government are now offering large areas of agricultural land on the perpetual lease system. But for the Councils' insisting last season on a purchasing clause in the leases, we should be virtually making the first trial in a civilised community of the nationalisation of the land theory. That theory is likely to be debated during the coming session, there being a strong feeling in the country against it. It is in fact, Mr. J. H. Ballance, the Minister for Lands, was so averse to the Council's amendment that possibly he may yet get it recommended.

The Governor, with his family, after a long stay at Auckland, where he is extremely popular, took a cruise among the islands and bays of the Hauraki Gulf, and returned to the capital on the 25th inst. His tour—Gisborne, Napier, &c. on the way. At Auckland he examined sites for fortifications and the proposed routes for canals across the five miles of land dividing the Waitemata and Manukau harbours. This scheme he rather discouraged, but it is a work which will be carried out in any case. The Government advantages it would lessen the journey from Sydney—and so from all Australia—to the greater part of the North Island by a day's steaming.

The doings of the Native Land Court have received much attention lately. Maori hold land in common, and before a European purchaser can get it to a given bid he must first satisfy the Native Land Court as to the right of the land to be sold. This involves intricate inquiries into Maori history, traditions, and customs, tribal wars and disputes, intermarriages, &c. Unscrupulous Europeans suggest and unscrupulous natives set up groundless claims, either to be awarded interests in the land or get blackmail from the interested parties. The Court is a very slow-moving engine, intricate, foolishness, and pettiness, and the lawyers so spin out the proceedings that the whole value of the land, and even more, is often swallowed up in settling the title. This demoralises the natives terribly; and drunkenness, fraud, and chicanery of every kind forming part of the proceedings. The Government are trying to get the court itself to escape the suspicion of contamination. The Chief Justice of the Court, Mr. J. F. Macdonald, lately said the hearings were attended by swarms of blacklegs, sharpers, and cheats—in fact, he compared the court to the racetrack, to the advantage of the latter. This has become a stigma on the court, and the Government have demanded Mr. Bryce having made a strong allusion to a hearing prolonged nearly six months by the lawyers. A commission of inquiry has been suggested; but the Native Minister is not the man to stick to a commission when he can do better for himself. He is more likely to get the blame of suspending the session, and then vigorously pursue the court reform.

The Minister told the Governor opened the new University College at Auckland, Parliament having last session made provision for five chairs. Their occupants were selected by the Agent-General, assisted by the highest educational authorities in New Zealand. The Government have no local habitation, being merely an examining body. There are affiliated colleges at Dunedin, Christchurch, and now at Auckland, while Wellington is likely soon to get one. Students, however, may prepare for degrees at several superior schools. An untoward accident threw a gloom over the opening ceremony on the 10th inst. The death of Professor George Francis Walker, M.A. (mathematics and mathematical physics), on May 1, threw a gloom over the proceedings.

On the west coast of the North Island, for nearly 300 miles, there are vast deposits of sand containing 35 to 50 per cent of iron. Several schemes to utilise it have failed, owing to the enormous expense of getting the sand to the smelting works at Larnak. The fuel then used was charcoal, and though iron was produced, the cost was nearly double its value. Now, at Otago, six miles from Auckland, the smelting is being done separately with local coal. An American invention cleans the iron from the refuse by rotary magnets, and the cost of the iron is reduced to 10s. per ton, and the best Swedish or Lowmoe iron, and too good for ordinary purposes, is being turned out at 40s. a ton. The promoters are about to spend nearly £100,000 on buildings and plant, and our imports of pig and bar iron may soon cease.

The Otago colony may have taken the field in New Zealand. An Otago citizen gave £200 to open a nucleus, and a few capitalists and majors have opened the campaign in Dunedin, Christchurch, and Auckland. This city has so far escaped, but probably not for long—perhaps session time is thought the best opportunity to remove the seat of war here, the Legislature proposing to meet in Dunedin. On the contrary, there is no reason to think there is not a large amount of material for the army to work on. Our larkins, though, make up in vigour for lack in number, and in Dunedin especially the officers have had a very stormy time so far. Their reception by the general community is lukewarm; but the Otago contingent is not so. On the contrary, they show their confidence by leading throats, &c., and boldly retelling the coercion of a million and a half of souls in the colony within the year. The population being half a million, this gives an average of three souls apiece, so statistics cannot be their strong point. The Blues think Otago is also on the war path here, and are making headway.

It was lately found that prisoners in the Dunedin gaol were kept months and even years after the expiry of their sentences by receiving punishment from visiting justices for breaches of discipline. There were cases of men being committed for a few days, and requiring to be kept in the gaol for a year or more. This secret tribunal, Great hubbub followed the discovery, amidst which the gaoler resigned, and the Government have now rather tardily appointed a Royal Commission of Inquiry.

The Canterbury Plains were partly flooded a fortnight ago. The heavy rain was accompanied with Otago stopped for several days. The plains are crossed by a series of the adjacent range, so broad and shallow that there are bridges nearly a mile long to span a volume of water that in ordinary rivers a channel 20 yards wide would hold. The plains are thus peculiarly liable to floods, which are rather frequent. In this case no lives were lost.

Reference has been made to a miser named Costley, who, dying at 80, and believing he had no relatives, left £135,000 to public institutions at Auckland. Since then, a brother, nephew, and even a wife of the deceased have proclaimed themselves, and talk largely of the Government's gross ignorance of the relationship is doubted, and the wife is especially suspected. The favoured institutions propose to induce the Treasurer to forego the legacy duty, amounting to £10,000, the money being left for charity; but their chances of success are faint.

A novel source of gas for illumination is reported to have been discovered by a German chemist named Guss. He has been experimenting with the lighting of the Hotel Zur Stadt Paris, in Breslau. Ordinarily, gas is produced by heating a mixture of coal and water, and the gas is then separated, the gas is washed by being passed through water, the carbonic acid fixed, and the light-yielding gas purified by passing it through a solution of caustic soda. Guss, with a portion of carbon, which the inventor does not disclose. This invention solves one great problem, if not two. It is a very simple and easy to make, and it is a very simple system. In new coal, through which the gas is passed, a new system has not been adopted, the method of Guss is reported to have been discovered by a German chemist named Guss. He has been experimenting with the lighting of the Hotel Zur Stadt Paris, in Breslau. Ordinarily, gas is produced by heating a mixture of coal and water, and the gas is then separated, the gas is washed by being passed through water, the carbonic acid fixed, and the light-yielding gas purified by passing it through a solution of caustic soda. Guss, with a portion of carbon, which the inventor does not disclose. This invention solves one great problem, if not two. It is a very simple and easy to make, and it is a very simple system. In new coal, through which the gas is passed, a new system has not been adopted, the method of Guss is reported to have been discovered by a German chemist named Guss.
